

## Clean Air Europe Srl focuses on Safety !!

The management and protection of health and safety in the workplace are for CleanAir Europe Srl in the first place to develop technical, commercial, and strategic decisions. The approach is systemic: every aspect is analyzed and improved in particular in the identification of the dangers that can be highlighted during the production of our filter bag cages.

The assessment and control of the risks associated with all company activities stimulate us to implement procedures aimed at the greater organization with the primary and fundamental objective of improving health and safety in the company by eliminating risk or minimizing its severity. The choices also concern our guests to whom we, therefore, ask for cooperation.

To access our site you will be informed of the company layout with the routes to follow and the production and logistical environments that you will visit, the emergency procedures.

Access will be possible only accompanied with some precautions that will also allow our workers to recognize the presence of visitors to pay more attention to the handling of our products within the production plant.

We will therefore provide you with a high visibility jacket and a pair of safety glasses to be able to observe our production process. We ask you to bring a pair of sturdy / safety shoes for access to the company.

Thanks for collaboration  
CleanAir Europe Srl

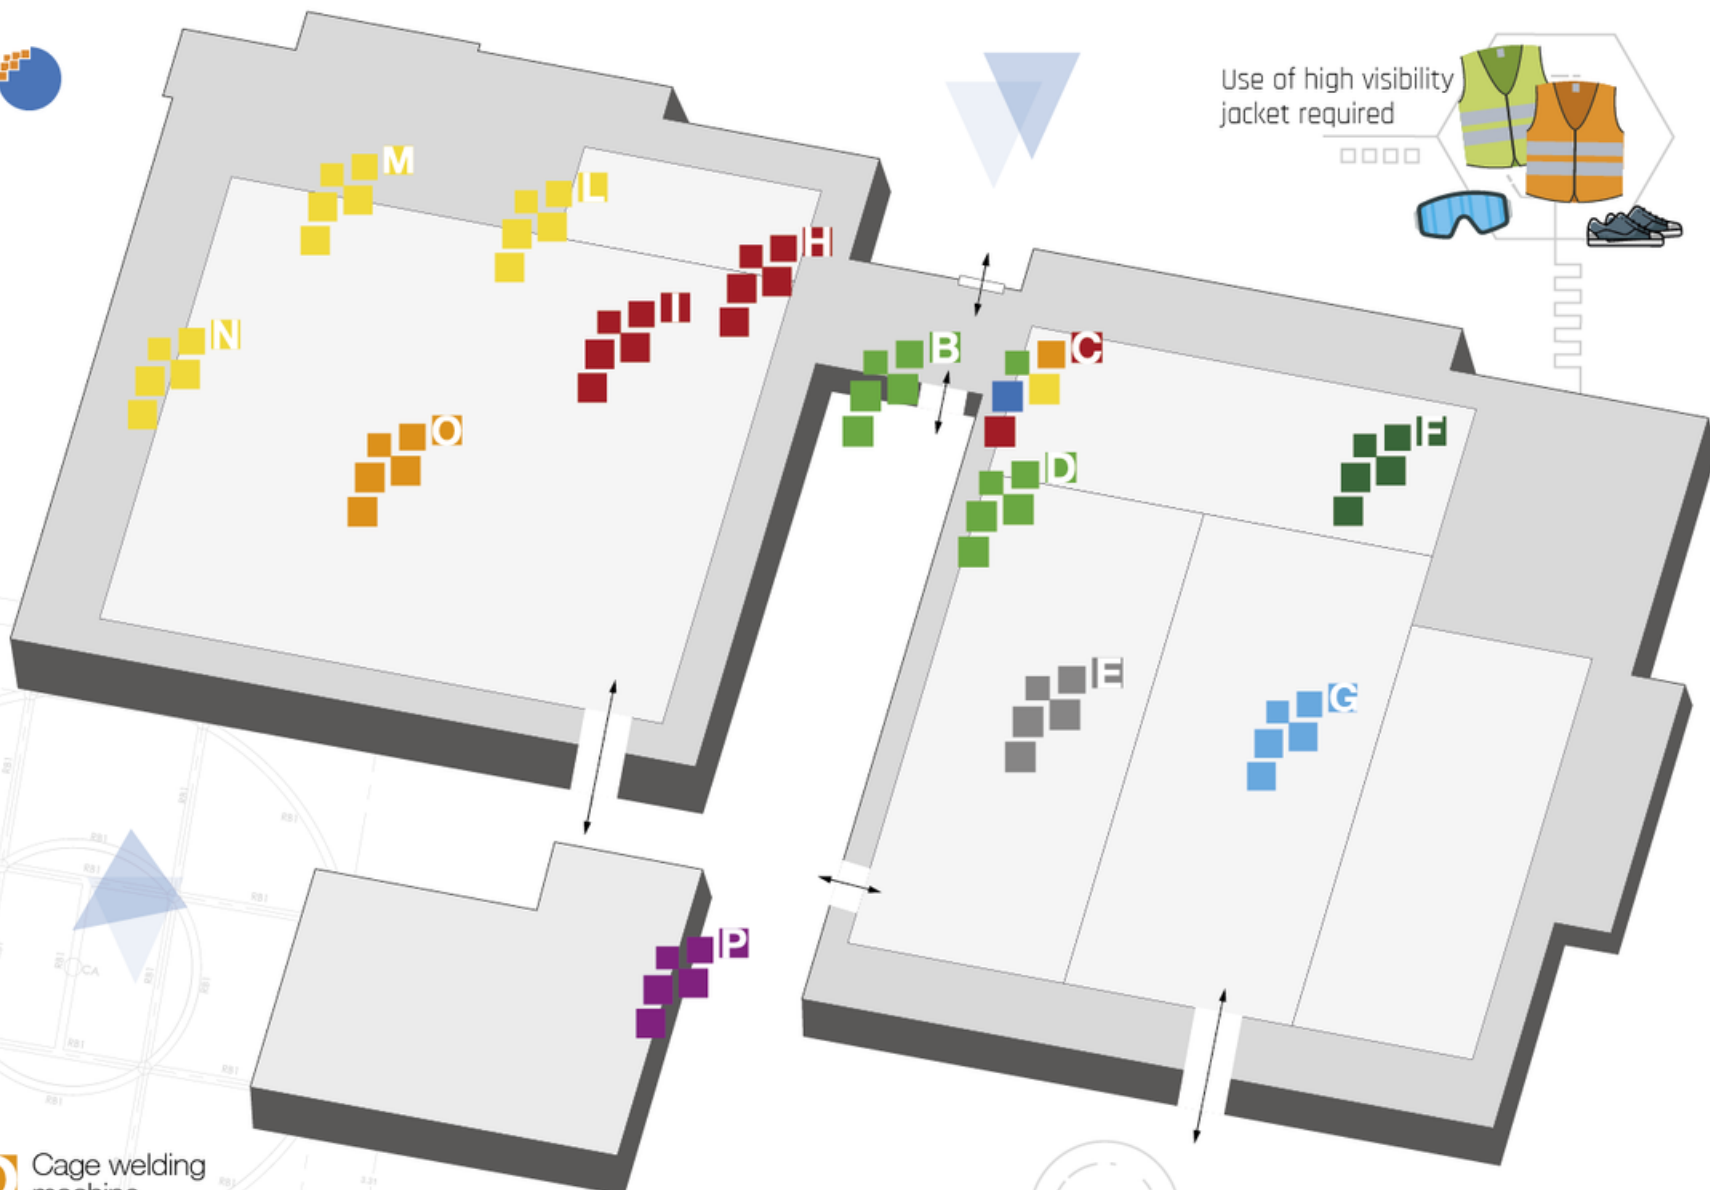

# CleanAir

Your filtration's support

CleanAir has created a company path where the main production departments are highlighted with letters.

We wish everyone a good visit.
